SUMMARY

Artificial Intelligence and Data Science student skilled in software development, web technologies, and building responsive applications. Experienced in AI and IoT projects with strong problem-solving abilities, eager to apply technical skills in real-world solutions.

EDUCATION

Kongu Engineering College <i>Bachelor of Technology - Artificial Intelligence and Data Science</i> CGPA: 9.25(till 3rd Sem) Kalaimagal Matric Hr Sec School HSC: Percentage: 92% SSLC: Percentage: 92.8%	Erode, Tamil Nadu Aug 2024 – May 2028 Batch Namakkal, Tamil Nadu Jun 2023 – Apr 2024 Jun 2021 – Apr 2022
---	---

SKILLS SUMMARY

- **Languages:** Python, JAVA, C
- **Web Development:** HTML, CSS, Javascript, React.js, Node.js, Express.js
- **Frameworks:** Scikit, TensorFlow, Keras, FastAPI, Numpy, Matplotlib, Pandas, Pytorch
- **Tools & Database:** GIT, MySQL, MongoDB

EXPERIENCE

- **Ventro** CubeAI Solutions
Student Developer Dec 2025 - Apr 2026
 - Developed an Instagram-inspired event management application that allows users to create, share, and explore events through a dynamic social media-style interface, incorporating features such as event posts, likes, comments, and booking functionalities to enhance user engagement.
 - Designed and implemented a responsive, user-friendly interface using modern web technologies to ensure smooth navigation, real-time interaction, and a seamless user experience across different devices and screen sizes.

PROJECTS

- **Smart LPG Cylinder Monitoring System** **Tech Stack:** Embedded C, Arduino IDE, ESP32
IoT Based Sept 2025 - Nov 2025
 - Developed a Smart LPG Monitoring System using ESP32, load cell, and HX711 amplifier to measure and track real-time gas levels with improved accuracy and reliability.
 - Developed a machine learning-driven solution to analyze gas usage patterns and integrated Wi-Fi-based alert mechanisms to notify users of low gas levels, enhancing safety and optimizing gas utilization.
- **Crop Pest and Disease Detection System** **Tech Stack:** OpenCV, Streamlit, CNN
Machine Learning and IoT Jan 2026 - Apr 2026
 - Developed a machine learning model that combines crop leaf images and sensor data (soil, temperature, soil moisture, humidity) to detect crop pests and diseases, while building a smart agriculture system integrating AI and IoT for early detection.
 - Implemented a CNN-based model for leaf analysis, integrating simulated multisensor data for environmental assessment, and developed a Streamlit dashboard with risk evaluation and real-time alerts using edge-based processing.

LEADERSHIP

- Class Representative (2025-26)
- Artificial Intelligence Coding Club Executive Member (2025-26)
- Mobile Application Development Club Executive Member (2025-26)

CERTIFICATIONS

- Proof of Concept(Ideathon'25) - September, 2025
- NASSCOM Data Preprocessing and Visualization - October, 2025
- Infosys JavaScript - March, 2026
